JOHANNES THIEL

(EN)

Johannes Thiel (*1999, Germany) creates hybrid sculptures and installations that explore technology and organic form as continuous, overlapping realms. His visual language is informed by industrial fabrication techniques and digital design processes. The works evoke prosthetic body fragments, biomechanical prototypes, or technical devices that simulate function without ever fully enacting it.

Through automated processes such as 3D printing, digital designs are transformed into physical structures. Biomimetics, morphogenesis, and digital parametric logic intersect in their formal organization, giving rise to structures that seem grown rather than built, products of industrial protocols and algorithmic processes governed by repetition, mutation, and deviation.

The surfaces are smooth and sterile, devoid of human touch, yet beneath this precision lies an uncanny vitality: the objects tremble, shift, and appear to breathe, like machines or organisms waiting for activation. They seem to belong to a future archaeology: organic devices suspended between prototype and fossil, remnants of a world where evolution and technological progress are inseparably entwined. Their strangeness reflects a present already steeped in the future.

Johannes Thiel is currently studying Fine Arts at the Universität der Künste Berlin under Prof. Karsten Konrad. He lives and works in Berlin.

Johannes Thiel (*1999, Deutschland) entwickelt hybride Skulpturen und Installationen, die Technologie und organische Form als kontinuierliche, sich überschneidende Bereiche begreifen. Ihre visuelle Sprache ist geprägt von industriellen Fertigungsweisen und digitalen Gestaltungsprozessen. Sie erinnern an prothesenhafte Körperfragmente, biomechanische Prototypen oder technische Vorrichtungen, die Funktionalität simulieren, ohne sie je wirklich einzulösen.

Mittels automatisierter Fertigungsverfahren wie 3D-Druck werden die digitalen Entwürfe in physische Objekte überführt. In ihrer formalen Logik kreuzen sich Bereiche der Biomimetik, Morphogenese und digitalen parametrischen Gestaltung. Es entstehen Strukturen, die nicht gebaut, sondern gewachsen erscheinen, Ergebnis industrieller Protokolle und algorithmischer Prozesse, deren Grammatik aus Wiederholung, Mutation und Abweichung besteht.

Die resultierenden Oberflächen sind glatt und steril, ohne menschliche Handschrift. Doch unter der Präzision liegt eine eigenartige Vitalität: Die Objekte zittern, bewegen sich, scheinen zu atmen, wie Maschinen oder Organismen, die auf ihre Aktivierung warten. Sie wirken wie Artefakte einer zukünftigen Archäologie: organische Apparate zwischen Prototyp und Fossil, Überreste einer Welt, in der Evolution und technologischer Fortschritt untrennbar geworden sind. Die Fremdartigkeit dieser Objekte spiegelt eine Gegenwart wider, die längst futuristisch geworden ist.

Johannes Thiel studiert Bildende Kunst an der Universität der Künste Berlin bei Prof. Karsten Konrad. Er lebt und arbeitet in Berlin.
